

Visual familiarity trajectories and their psychological moderators

Matched Experiments 3 + 5 · n = 153; 33,048 trials

a Observed and fixed-effect fitted category trajectories

Participant-balanced means [95% CI] and frozen fallback fits

b Complete overall-moderator screen · BH across 12 tests

Moderator × comparison-position coefficients; positive values indicate more familiarity-directed change

Panel a: points are participant-balanced means, bands are 95% participant intervals and lines are frozen fallback-model fits.
Panel b: * HLM BH $q < .05$; dark outline also CR1 BH $q < .05$. Coefficients are per 1-SD moderator increase.
